Education

BA · University of California at Berkeley · Computer Science, Math · 2013
MS · Levy Institute at Bard College · Economic Theory and Policy · 2016
Technologies Claude · Codex · C# · .NET · Python · SQL · Azure
Kafka · Redis · Snowflake · Azure DevOps · GitHub Actions · Datadog

Work Experience

Carvana (2022-2026)
Senior Engineer I

- Designed and owned Phantom Delivery Service, an in-memory compute service that modeled the complete vehicle-delivery network to calculate delivery estimates for newly added vehicles
- Achieved 7.5 ms p99 latency at 100 requests per second while performing compute-intensive delivery-time calculations
- Built Kafka pipelines spanning 12 fulfillment-event topics to power near-real-time forecasting and logistics optimization and feed Snowflake analytics
- Improved maintainability across 28 repositories by mentoring peers in clean software design and leading development of shared libraries and reusable components
- Implemented automated Claude pull-request reviews in GitHub Actions, embedding AI-assisted feedback directly in the development workflow
- Led an AI engineering roundtable to evaluate emerging tools and establish team best practices for AI-assisted development

Phoenix Coding Academy (2018-2022)
Computer Science Teacher

- Designed and delivered project-based lesson plans for advanced software-development courses
- Taught programming fundamentals, application design, and collaborative problem solving through hands-on projects
- Led the FIRST Robotics program, mentoring students in Python programming, iterative testing, and competition preparation

FIRST AmeriCorps VISTA (2017-2018)

Tradeshift (June 2013-August 2015)
Software Engineer

- Developed build scripts to improve infrastructure and app deployments
- Wrote a RESTful API and application for financing invoices on Tradeshift's platform
- Utilized Elasticsearch to improve searching for member companies on the website

Politify (Summer 2012)

Cisco Systems (Summer 2011)
